FINFIT

Proposed Solution

- What it is: A web app to log expenses, set budgets, and track savings goals.
- Money Health Score: A 0-100 score based on budgets, savings, and overspending.
- Problem it solves: Students run out of money without knowing where it went.
- Innovation: Gamified scores, bonus points, and progress bars build saving habits.
- Uniqueness: Combines health score, savings goals, and friend expense-splitting for students.

TECHNICAL APPROACH

- Frontend: HTML, CSS, JavaScript with Chart.js for charts.
- Data storage: Browser local storage (Flask + SQLite for future scope).
- Score logic: Budget adherence + savings progress, minus overspending penalty.
- Flow: Add expense → categorize → compare to budget → update score → show tips.
- Visuals: Flowchart

FEASIBILITY AND VIABILITY

- Feasiblity: Built with free, beginner-friendly tools.
- Risk: Users may forget to log expenses, data privacy and manual entry errors.
- Solutions: Quick-add buttons, reminders, local storage, simple UI.
- Streaks and reminders encourage daily logging.

BUSINESS CANVAS

- Mission and vision: Build money habits early; every student financially aware.
- Market: College students and first-time earners.
- Competition: Walnut and Splitwise lack a health score.
- Revenue: Free plan, premium analytics, partnerships.
- Costs: Near zero for the prototype; hosting and marketing later.

IMPACT AND BENEFITS

- Target audience: Students gain clear control of their pocket money
- Social: Builds saving habits and reduces money stress.
- Economic: Less overspending, more savings.
- Environmental: Paperless tracking.
